

# The Case for Molecular Mapping in Forest Tree Breeding

*Rongling Wu, Zhao-Bang Zeng, Steven E. McKeand,  
and David M. O'Malley\**

Departments of Forestry and Statistics, North Carolina State  
University, Raleigh, NC 27695

- I. INTRODUCTION
- II. CONVENTIONAL FOREST TREE BREEDING
- III. QTL AND FOREST TREES
  - A. The Number and Effect of QTL
  - B. Overdominance and Epistasis
  - C. Pleiotropy
  - D. QTL  $\times$  Environment Interaction
  - E. QTL and Development
  - F. Limitations of Current QTL Mapping Experiments
- IV. QTL AND FOREST TREE BREEDING
  - A. Small Numbers of QTL
  - B. Large Numbers of QTL
  - C. Early Selection
  - D. MAS Reduces Resources Needed for Progeny Testing
  - E. Factors Affecting Efficiency of MAS
- V. CONCLUSIONS AND FUTURE PROSPECTS
- LITERATURE CITED

*\*Acknowledgments:* We thank Ronald R. Sederoff and David L. Remington for stimulating discussions and contributions to this review, Jules Janick for helpful suggestions about writing this manuscript, and three anonymous referees for critical comments on an early draft of this paper. This work is partially supported by the North Carolina State University-Industry Biotechnology Associates Consortium, the North Carolina State University-Industry Cooperative Tree Improvement Program, the Department of Forestry and the Agricultural Research Service at NCSU, and a grant from the National Institutes of Health (GM45344).
